# Fake Online COVID-19 Map Delivers Malware

To All:

The Cyber Security Team recently learned that there is a fake website available that appears to provide a map of COVID-19 cases around the world. If users visit this site, malware infects their computers with a program to steal sensitive data.

**Do <u>not</u> for any reason visit "corona-virus-map[dot]com."**

If you would like to view a reputable map of COVID-19 cases across the globe, please visit the Johns Hopkins University site.

Thank you.
